

# ShrimpKing® Snow Pops

The constant snack for all invertebrates in freshwater aquariums

## Premium Shrimpfood

- The tasty feeding fun for all shrimps.
- Sinking food sticks made of 100% organic soy bran. For a healthy, balanced growth and plentiful reproduction.
- **Guarantee:** Without artificial preservatives and colorants, without fish meal.
- The food sticks easily crumble away and form a „food carpet“ – thus, every animal is able to get to the food.
- **Feeding recommendation**
- Approx. 5 mm stick per 20 shrimps.
- **Contents:** 40g

## Information regarding use

Right after reaching the bottom of the aquarium, the sticks literally „pop“ up, crumble away and form a large „food carpet“. Thus, every animal gets its share and there will be no food stress, which is particularly important for young and less assertive animals. Your shrimps will dash at this food because of the aromatic ingredients.

Due to the high proportion of crude fibre, the sticks decompose only gradually and thus can remain in the aquarium longer .

Snow Pops are ideally suited as weekend food. Even professional Asian breeders swear by this food.

## Background information

Soy beans, belonging to the family of pulses, are known as source of high-quality protein. The legumes are rich in vital amino acids, vitamins, polyunsaturated fatty acids as well as cell protection micronutrients , such as folic acid and selenium. Those are accompanied by essential minerals such as calcium, magnesium, iron and zinc. Due to their prebiotic properties, dietary fibres provide for a healthy digestion. The numerous positive ingredients make Snow Pops an ideal alternative and supplement to the main feed. They promote a healthy, balanced growth and plentiful reproduction. Also ideally suited as valuable snack.

### Supplementary food for ornamental shrimps

**Ingredients:** Soya bran

**Analytical constituents:** Crude protein 13.4%, crude fat 4.2%, crude fibre 32.9%, crude ash 4.8%
